

To add the Playwright Script in AI Browser Extension , The prompt used in VS code using Copilot to add Playwright code

Project is having implementation for Selenium with java. When i select Language as Java and Selenium as Browser Engine in the Setting tab. Selenium with Java code is getting generated successfully. I want to implement for TypeScript as Selected Language and Playwright as Browser engine without impactong the existing implementation for Selenium Java. Analyze the impacted files and fuctions. I need to review and approve. Then proceed with implementation in Agent mode

Completed 3 steps in 26s

Review Summary

I have analyzed the current Java + Selenium path and confirmed the extension is intentionally built around Java/Selenium only. I have not changed any code yet; this is a review pass for approval before implementation.

The core issue is that the generation logic in `chat.js` explicitly gates all supported generation to Java + Selenium, while the UI in `panel.html` already exposes TypeScript and Playwright as options. That creates a mismatch between the settings UI and the actual generation engine.

▼ Todos (2/3)

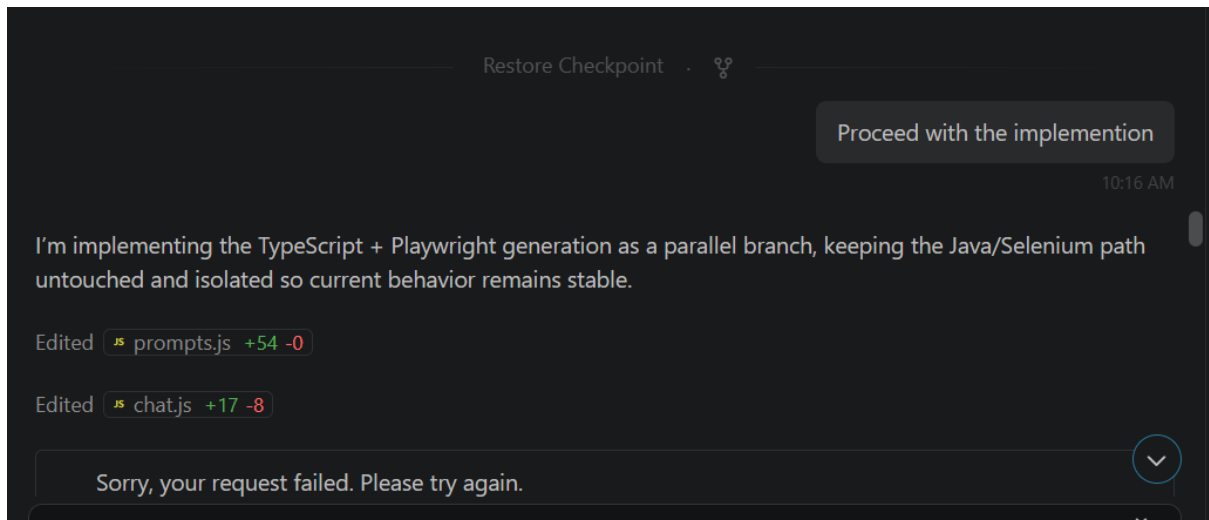

- ✓ Analyze Java/Selenium path
- Review Playwright/TypeScript impact
- Implement after approval

+ `popup.js`

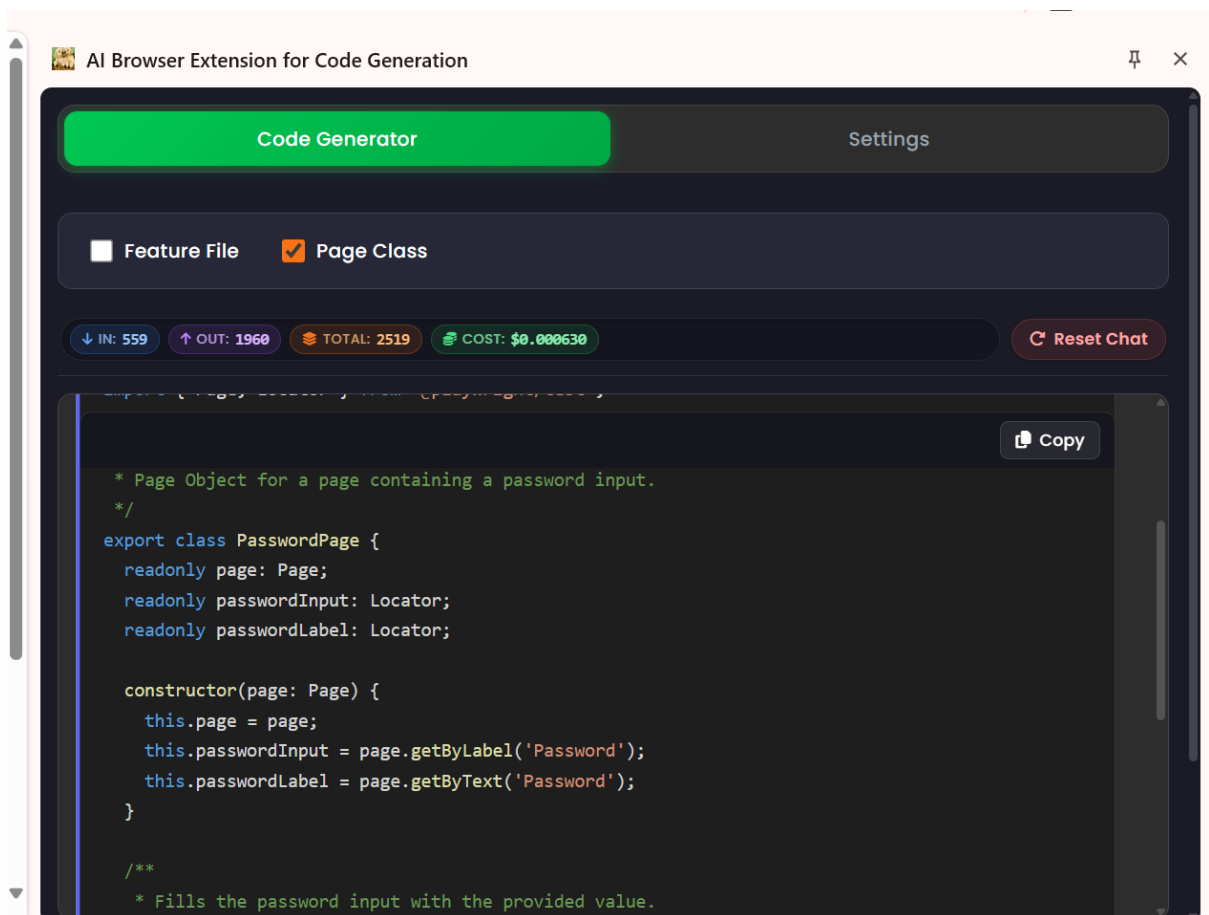

Describe what to build

+ Agent Auto Balance

↑

Playwright code is generated

Model Qwen is added in popup.js code for AI extension code

The image shows a VS Code editor window with the file `popup.js` open. The code defines a `modelsByProvider` object with three providers: `groq`, `openai`, and `inceptionlabs`. The `groq` provider currently lists `openai/gpt-oss-120b`, `openai/gpt-oss-20b`, and `qwen/qwen3.8-27b`. The `openai` provider lists `gpt-4o` and `gpt-4o-mini`. The `inceptionlabs` provider lists `mercury-2.5`, `mercury-2`, and `mercury-edit`. A function `updateModelOptions(provider)` is also defined.

The Chat sidebar on the right shows a project code review for enhancements. It contains two messages:

- Message 1: "There are 3 models available under Select Model dropdown in the Settings tab. I want to add on..."
- Message 2: "I need to add qwen/qwen3.8-27b under groq without impacting the Whole code. So add this model."

Below the messages, it says "Completed 3 steps in 48s".

A green checkmark icon is next to the text "Added the Groq model".

Below this, it says "I added the new model under the Groq provider in the model dropdown." with a dropdown arrow icon.

Below this, there is a section titled "Todos (2/3)" with a list of tasks:

- ✓ Analyze Java/Selenium path
- Review Playwright/TypeScript impact
- Implement after approval

Below the todos, there is a section titled "JS popup.js" with a text input field "Describe what to build" and a button "Agent".

At the bottom, there is a section titled "Local" with a button "Default permissions".
